The Teaching Program

Kiro Kids three day seminar on management of the pregnant woman is an in-depth, innovative training program developed by the Kiro Kids pregnancy care special interest chiropractor Dr Kimberley Tuohey in consultation with Dr Neil J Davies and Ms Kyla Sheridan, a practicing Australian midwife with an interest in natural, minimal intervention childbirth and assisting second time mother's who had a first time Caesarean section to have a natural, vaginal birth.

The Seminar Presenters

Dr Tuohey has been practicing paediatrics and chiropractic pregnancy management for 10 years, the last 8 of those in the Kiro Kids group. Dr Tuohey has 4 children of her own and has a keen interest in supporting second time mothers through a vaginal birth following a first time Caesarean section (VBAC). Dr Tuohey has developed a system of chiropractic methodology for treating pregnant women based around the Kiro Kids NeuroImpulse Protocol technique. Brilliant in their simplicity, these procedures will greatly empower the family chiropractor to not just manage pregnancy related pain syndromes, but to make the whole pregnancy and delivery experience a special event.

Ms Kyla Sheridan is a mother of three beautiful girls and has practiced as a midwife for the past 15 years. Kyla is an enthusiastic advocate of chiropractic care for pregnant women and has consulted extensively with Drs Tuohey and Davies in the development of this cutting edge, long overdue teaching program.

Overview of Teaching Content

Day 1 Before Conception

- Hygienic, preconceptive care
- NIP for the pregnant patient — the absolute bottom line

Day 2 Pregnancy

- The clinical history in the pregnant patient
- Assisting the pregnant patient to make delivery and labour room decisions
- Examining the pregnant patient
- Identification and management of common clinical conditions in pregnancy
- Identification and management of common subluxation syndromes in advancing pregnancy

Day 3 Labour, Delivery & Beyond

- The Peri-natal period
- The post-natal period (The first 12 weeks)
- Identification and management of common subluxation syndromes following delivery
- Identification and management of common psychological problems
- Identification and management of common mother/baby interaction problems
