management which includes clear protocols for involving parents, teachers and other health care providers. The protocols discussed in this DVD are those used in the Kiro Kids clinics across Australia.

Chiropractic Management of Epilepsy, Hypotonia and Head Trauma in Children

— Neil J Davies Chiropractor

In this presentation, Neil offers timely advice on how to obtain an accurate clinical history, how to apply the neurological examination to each case and most importantly, how to manage the child affected by these clinical problems. An excellent, practical DVD presentation.

Adjusting the Child

– Neil J Davies Chiropractor

In conjunction with writing the text Chiropractic Pediatrics A Clinical Handbook and authoring the Master of Science program (Chiropractic Paediatrics) Dr Neil Davies and the team at Kiro Kids have evolved a unique, neurologically based subluxation assessment protocol which is now used exclusively in the Kiro Kids clinics and taught in seminars worldwide. In addition, Neil and the team have identified sound, evidence-based principles involved in choosing the right technique for each situation. The subluxation assessment protocol plus all the adjusting procedures for the spine and extremities used in the Kiro Kids clinics are demonstrated and explained in this outstanding 3-disc DVD presentation. There are four hours of lecture and demonstration with an entire 2 hour disc devoted to actual cases filmed on location as they happened in the Kiro Kids clinics. This is a unique educational experience you simply must have.

Examining the Child

– Maurice K Easton Consultant Paediatrician

A comprehensive presentation on the technique of examining children at different ages. Dr Maurice Easton is Associate Tutor at Melbourne University School of Medicine and a consultant paediatrician. Dr Easton utilizes a wide range of colour photography to demonstrate in detail technique of examination for the chest, abdomen, head & neck in addition to describing the assessment of growth. A large number of clinical slides complements the presentation as Dr Easton describes some of the more common problems likely to be encountered in chiropractic paediatric practice. The material presented by Dr Easton in this DVD is the benchmark for clinicians of all disciplines who see children as patients.

Normal and Variant Radiological Anatomy of the Paediatric Patient

– Lindsay J Rowe Consultant Radiologist

Lindsay Rowe has the unique characteristic of being both a chiropractor and a consultant radiologist. Lindsay has had a distinguished career in publishing and lecturing in the radiology field and now brings to the chiropractic profession this invaluable contribution. The interpretation of the

paediatric radiograph holds its own special challenges as one seeks to separate normal appearances from those associated with disease. Lindsay takes the viewer carefully and thoroughly through each region of the axial skeleton, using a wide range of radiographs to point out both normal and variant appearances. A masterful presentation making an otherwise difficult subject simple, understandable and easily within the reach of any chiropractor.

Radiology of Whiplash Injury

– Lindsay J Rowe Consultant Radiologist

Lindsay presents a detailed review of the important elements of the radiological appearances of the whiplashed injured patient. An invaluable presentation for chiropractors as an aid to writing medicolegal reports and making assessments of degree of tissue damage incurred

Radiology of Spondylolisthesis

– Lindsay J Rowe Consultant Radiologist

Lindsay presents a detailed review of the important elements of the radiological appearances of the patient with varying degrees of spondylolisthesis. This presentation offers the chiropractor solid grounds for making management decisions on these patients.

Radiology of Spinal Neoplasms

– Lindsay J Rowe Consultant Radiologist

While not common, spinal neoplasms can and do occur. The key for the chiropractor is to be able to recognize when the radiological signs suggest such a serious disorder so the patient can be offered the most appropriate care available.

How To Read A CT Scan

– Lindsay J Rowe Consultant Radiologist

In his usual expert way, making complex issues seem simple, Lindsay takes the viewer through the basics of reading a CT scan. He uses a wide

range of images to demonstrate both normal and pathological appearances. For today's chiropractor, constantly encountering patients who have had a CT scan, this DVD presentation is an essential library item.

The Neurological Examination of the Child

– Neil J Davies/Kimberley Tuohy Chiropractors

This presentation, the neurological examination of the child, was filmed on-location at the residential training school for master of science candidates in Melbourne, Australia. A dynamic presentation covering the neurological history, the importance of keen observation and a range of common sense, easily performed techniques of examination that will allow the chiropractor to make an in-depth assessment of the nervous system in children of all ages. The presentation is systematic, simple and augmented with a wide range of clinical slides to demonstrate examples of the sort of clinical problems one may encounter in chiropractic paediatric practice. To be able to accurately examine the child neurologically and appropriately interpret the findings is an essential skill for a chiropractor who sees children.

Chiropractic Management of Paediatric Headache

– Neil J Davies Chiropractor

A very detailed discussion of all the different categories of headache by aetiology that can affect the paediatric patient. From over 30 years of clinical and academic experience, Neil offers a sensible and safe approach to the diagnosis and chiropractic management of the child who presents with headache.

Chiropractic Management of School Learning Dysfunction

– Neil J Davies Chiropractor

Neil rolls together over 30 years off clinical experience with a very practical and down to earth approach to managing the child who has difficulties with learning. Neil offers some time proven advice on diagnosis and
